

AFM FIDDLE CAMP 2022 COVID POLICY (updated 12/21/21)

All students, instructors, and volunteers must show proof of full COVID vaccination or daily negative COVID test. Being fully vaccinated means completing your final dose of a COVID-19 vaccine at least 14 days prior.

- Proof of vaccination must be provided prior at the start of camp, either by uploading a copy of your vaccination card during the registration process or in a separate email to afmfiddlecamp@gmail.com.
- Proof of a daily negative COVID test result includes bringing a printed or digital copy of a negative COVID-19 PCR test taken within 24 hours of the start of Fiddle Camp each day, or a negative COVID-19 antigen test taken within 6 hours of the start of Fiddle Camp each day. Proof of a negative COVID test result must be shown when entering the building each day.

All students, instructors, volunteers, and visitors will be required to wear masks inside the building.

- Individuals must wear masks that fit securely around their face and cover the mouth and nose. Cloth or surgical masks should have two layers. Balaclavas, bandanas, face covers with exhaust valves or vents, masks made with mesh or lace type fabric, gaiters, scarves, and ski masks are prohibited. If any participant comes with a prohibited mask, we will ask them to remove it and provide them with a medical-grade mask.
- Students, instructors, and volunteers will be allowed to remove masks when eating and drinking. Lunch and snacks will be consumed outside unless it is raining.

If someone tests positive, we send them home and they won't be able to return. This means that it is vitally important for everyone involved to use all available precautions (masking, vaccinations, stay out of crowded events/spaces) in the lead-up to camp in an effort to stay COVID-free.

Bottom line from the MN Dept of Health: If you are an unvaccinated adult and are exposed to someone who is sick, you need to quarantine. If you are a student in a K-12 classroom setting or are a vaccinated adult, you do not need to quarantine after exposure to someone who is sick. Below is a more detailed explanation:

The current recommendation for students who have exposure to someone who tests positive is:

If you are a student in an indoor K-12 classroom setting and were within 3-6 feet of another student with COVID-19, you do not need to quarantine if both the infected student and the exposed student(s) correctly and consistently wore well-fitting masks the entire time. This exception does not apply to teachers, staff, or other adults in the indoor classroom setting. For more information about close contacts in schools, refer to [Schools and Child Care COVID-19: Best Practice Recommendations](#).

The current recommendation for an adult who is vaccinated and has had exposure to someone who tests positive is:

- Get tested five to seven days after exposure.
- Wear a mask in public indoor settings for 14 days following exposure or until you receive a negative test result.
- Consider wearing a mask at home for 14 days or until you receive a negative test result if you live with someone who is immunocompromised, at increased risk of severe disease, or unvaccinated.
- You do not need to quarantine if you do not have any symptoms of COVID-19. You should watch for symptoms for 14 days.
- If you start to have any symptoms, stay home and away from others immediately (isolate), get tested again, and follow other recommendations at [If You Are Sick or Test Positive](#).
-

The current recommendation for an adult who is unvaccinated and has had exposure to someone who tests positive is:

- Stay home and away from others (quarantine) and wear a mask if other people are around.
- Get tested immediately. If the test is negative, test again five to seven days after the last time you were close to the person with COVID-19. If you are considering a shortened quarantine period of seven days, your second test must be at least five full days after your last exposure. You should also follow the list of considerations below ([Under certain conditions and a negative COVID-19 test: 7-day quarantine](#)).
- Watch for symptoms for 14 days. If you start to have any symptoms, get tested again right away.
- If you test positive or start to have symptoms, follow the recommendations on [If You Are Sick or Test Positive](#).
- For more information on when to get vaccinated, refer to the "If you have had recent close contact or mild illness" section on [About COVID-19 Vaccine](#).

AFM Fiddle Camp reserves the right to cancel camp due to an increase in local cases, updated recommendations/regulations from the CDC, Minnesota Department of Health, or local leaders, or because of the exposure or infection of any Fiddle Camp student, instructor, or volunteer.
